| CLEANING EQUIPMENT                         | Clean all equipment with water immediately after use.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                        |  |
| PRE-APPLICATION SURFACE PREPARATION        | Surfaces must be sound clean, dry an                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | ad froe from all defective or poorly adhering material |  |
| SURFACE PREPARATION                        | Surfaces must be sound, clean, dry and free from all defective or poorly adhering material, dirt, grease or wax and be thoroughly rubbed down using a suitable abrasive paper and dusted off. Treat areas affected by mould, fungi or algae with Dulux Fungicidal Wash (A980-19260). If after thorough preparation, surfaces remain powdery, seal with one coat of an appropriate Dulux Sealer/Primer (see below). It should not be applied on areas where moisture reading (as measured by Protimeter) exceeds 15%. These walls should be left to dry further. |                                                        |  |
