

Formmax NS

Lubricant and release agent

Description

Formmax NS is a premium performance lubricant based on polyalkylene glycol. Because of its formulation, it leaves an homogeneous surface and enhances release between mold and part.

Benefits

- Good release properties
- High viscosity index
- Good behavior at different temperatures
- Low friction coefficient

Applications

Formmax NS is designed as a mold release agent and also for lubrication of bearings and compressors.

Typical performance data

	NS
ISO Viscosity Grade	100
Density at 20 °C, gr/ml	0.99
Viscosity at 40 °C	100
Viscosity Index	200
Flash point, °C	235
Pour point, °C	-40
Rust Test	Pass
