Brushless Motor and Driver Package

BMU Series

Easy Speed Control with Spin and Push

30 W Full Size

Lineup Added

Hypoid Right-Angle
Hollow Shaft Gear and
Various Gears

Gearheads Supporting
Food Machinery Grease H1

Easy Speed Control with Spin and Push

A settings dial designed for easy speed control.

Once the motor and the driver are connected, all you do for this simple wiring is turn on the switch.

The new brushless motor NexBL is a compact, high-power, and high-efficiency motor.

For the **BMU** Series that focuses on user-friendly features and affordable prices, we also provide various gearheads, including hypoid right-angle hollow shaft gearheads.*

Wider applications.

* Some gearheads support food machinery grease H1

- ① Spin and push. Easy speed control.
- ② Easy wiring. Quick start.
- ③ Opening the panel reveals extensive functions.
- ④ New Brushless Motor NexBL.

NexBL is Oriental Motor's new brushless motor, having redesigned the entire structure for maximizing the performance required for motors. NexBL is more compact with higher output and efficiency than ever before.

Brushless Motor and Driver Package **BMU** Series

BMU Series

Cable Type

Connector Type

Connects the motor and the driver directly. Delivers smart wiring and dust-resistant and watertight performance (with a Degree of Protection IP66).

Introduction of the NEW Lineup → Page 4

Introduction of the NEW Lineup

4 Types of Selectable Gearheads

The connector types of the **BMU** Series suit more variations of gears. You can choose to meet your usage or method of installation. For types and features of each gearhead, see pages 10 and 11.

 <p>IP66</p>	 <p>IP44</p>	 <p>IP66</p>	 <p>IP66</p>

● Compact, Lightweight, High Power, Energy/Space-Saving

Comparison with general 400 W motors

Motor length only	1/3
Motor and Driver Efficiency	87%

Compact, Lightweight

High Power

Energy/Space-Saving

* For the legged gearhead **JB** gear with 1/5 gear 400 W ratio.

Supports Food Machinery Grease H1 (Connector type only)

Food machinery grease H1 is used for gear lubrication.

- **What is food machinery Grease H1?**
It is a grease categorized by the NSF as "a lubricant with incidental food contact for use in and around food processing areas" categorized by the NSF.
What is the NSF (NSF International)?
It is an international third-party certifier headquartered in the U.S. which provides global services regarding public health and the environment, including standard development, product certification, audits, education, and risk management.
- **The rated life of the gearhead is 5,000 hours**

Features of Brushless Motor

Because our brushless motor do not have brushes, which is the DC motor demerit, they produce less noise and are maintenance-free. The use of permanent magnets allows for compact, high output, and highly efficient motors.

Wide Speed Control Range

The brushless motor has a broader speed control range compared to AC speed control motors and inverters. They are ideal for applications that require a constant torque for all speeds, low to high.

Product Group	Speed Control Range*	Speed Ratio
Brushless Motor (BMU Series)	80~4000 r/min	1:50
Inverter Control Three-Phase Induction Motor	200~2400 r/min	1:12
AC Speed Control Motor	50Hz: 90~1400 r/min	1:15
	60Hz: 90~1600 r/min	1:17

*The speed control range varies depending on the model.

Stable Speed Control

The brushless motors always monitor feedback signals from the motor and compare them with the set speed to adjust the applied voltage. For this reason, even if the load changes, stable rotation is performed from low speed to high speed.

The table on the right shows the speed regulation (load) for each model. It shows how much the rotational speed varies by changing the load between 0 to rated torques.

Model	Speed Regulation with Varying Loads	Condition
		0 ~ rated torque at rated speed
BMU Series	$\pm 0.2\%$	
BLE2 Series	$\pm 0.2\%$	
BLE Series	$\pm 0.5\%$	
BXII Series	$\pm 0.05\%$	
BLH Series	$\pm 0.5\%$	

Thin, Lightweight and High Power

The brushless motors use permanent magnets so that they are thin and lightweight but yet have high power. These contribute to the downsizing of equipment.

Contributes to Energy Savings

The brushless motors use permanent magnets in the rotor, reducing secondary loss and power consumption. This contributes to energy savings with the equipment.

Main Features of BMU Series

- Easy speed control with "Spin and Push" of the setting dial.
- Easy wiring by connecting the motor and the driver and turning on the switch.
- Employs new compact, high output, highly efficient brushless motors.
- Lineup cable and connector types.
- The connector type delivers dust-resistant and watertight performance with a Degree of Protection IP66 specification.
- Delivers the highest level of speed control at reasonable prices.

- 2 motor types are selectable by the connection method.

Cable Type Motor
(Degree of Protection IP40 specification)

Connection Cable (Sold separately)

Connector Type Motor
(Degree of Protection IP66 specification)

Features

Spin and Push. Easy Speed Control.

Turn the dial, and set the speed to your desired speed.

Turning the dial slowly changes the speed by 1 r/min.

Pushing the dial sets the speed.

The dial operation can be locked.

Easy Wiring. Quick Start.

The motor and driver can be easily connected.

The power and I/O connectors are of the screwless type.

With only one switch, the motor can be started immediately.

The rotation direction of the motor can be changed with easy operation.

Maximum Speed of 4000 r/min Speed Ratio 1:50* (2.5 times of the conventional ratio)

BMU Series has a maximum speed of 4000 r/min*.

Speed ratio of 1:50 (80~4000 r/min*) is realized. Speed regulation has been greatly improved from $\pm 0.5\%$ to $\pm 0.2\%$. With the highest standards of speed control, we respond to our customers' demands.

*Depends on the gearhead.

· **BMU Series 120 W**

If you open the Front Panel on the Driver, you can set up Various Functions.

(Typical functions that can be set while the front panel is opened)

- Motor Startup/Stop *
 - Adjustment of operating speed *
 - Setting the operating speed *
 - Selecting the rotation direction *
 - Changing the indication
 - Operating speed indication when the speed reduction/speed increasing ratio is set
 - Setting the acceleration/deceleration time
 - Dial operation lock
 - Speed setting for the 4-speed operation
 - Speed limits setting
 - Validating the external operating signals
 - External input/output signal allocation
 - Setting the overload alarm detection time, except during axial lock
 - Easy holding function for output shaft
- *Setting is possible even if the front panel is attached.

Speed indication

Displays the motor rotational speed by 1 r/min. Additionally, with the "gear ratio" parameter of a conveyor, the display shows the conveyor transfer speed in m/s directly.

Load factor indication

With the rated torque of the motor at 100%, the load factor can be expressed in percentage (40~200%). The load condition during the start-up, as well as the load condition due to the aging deterioration of the equipment can be confirmed.

Indication at a load factor of 50%

Protective function

Various protective functions such as overload protective function and overvoltage protective function are equipped. When a protection is triggered, it shows the alarm code on the display and outputs an alarm signal.

4-speed setting

Operation in 4 speeds is possible by setting the data to operating data No.0, No.1, No.2, or No.3, and switching the input of the M0 and M1 terminals.

- In 4 speed drive, switching of the rotation direction from external input signals cannot be performed. (For 30, 60, 120 W)

Sets the acceleration/deceleration time

The acceleration time and deceleration time can be digitally set, in addition to adjusting them with an acceleration/deceleration time potentiometer.

- Setting range:
0.0~15.0 sec (Initial value: 0.5 sec)

For the digital setting, the acceleration time and deceleration time are each set independently.

This allows you to finely adjust the speeds to mitigate shocks on conveyed products at startups and stops and freely set them according to the desired tact time.

Output shaft is held when stopped

When the motor is stopped, the load can be electrically held.

(Holding force is up to 50% of the rated torque.)

Note

If the electrical power supply to the driver is turned OFF, the holding force dissipates. This cannot be used to prevent a fall during a power outage.

Other functions

● Lock the dial operation

This prevents the undesired changes in the speed and the changes or deletion of data with the operation of the dial.

● You can set to "Front Panel Operation Invalid"

When operating using external signals, the front panel switch operation can be set to "Invalid".

Features of Connector Type

The connector is new and specially developed for compact motors. It connects the motor and the driver directly. In addition to the motor mechanism, improved dust-resistant and watertight performance has allowed the motor to obtain a Degree of Protection IP66*.

New connector

The built-in gasket and the O-ring contribute to improved watertight performance. The locking lever makes connection easy, eliminating the trouble to fix screws.

Stainless steel shaft equipped as a standard*

Highly rustproof, anti-corrosive stainless steel is used for the shaft. Stainless steel is also used for the parallel key and the installation screws.

*The protection rating and the output shaft material depend on the gearhead used. For details, refer to the Lineup chart. → Page 12

Cable with Selectable Drawing Direction for Direct Connection

2 types of connection cables are available to choose from depending on the direction to draw out. For direct connections between the motor and the driver, one connection cable can extend up to 10 m, eliminating the need for a relay.

Selectable cable drawing direction

2 types are available to choose from depending on the direction to draw out the motor cable.

(The round shaft type draws only from the counter-output shaft side.)

Connects the motor and the driver directly

One cable can extend up to 10 m without a relay, eliminating the need for relays. Only this one cable is required for the power, signals and grounding, reducing wiring efforts.

Designed for Compactness, High Power and High Efficiency

An optimal magnetic design and high-performance material enable a stator plate thickness of just 11.2 mm. This slimness realizes a highly efficient power unit that outputs 120 W. Compared with the conventional brushless motor of the same output power, the stator plate thickness is only half of the conventional one (For motors with a frame size of 90 mm).

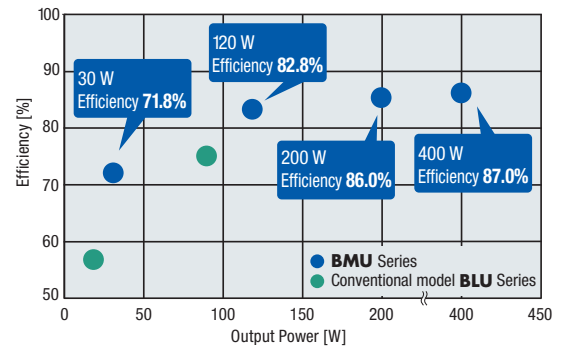

Moreover, the use of high-performance material reduces the amount of material used, therefore reducing costs.

Substantial Improvement in the Efficiency of the Motor and Driver Package

The **BMU** Series sees a maximum of 15% unit efficiency improvement compared with conventional models*.

***BMU** Series 30 W and **BLU** Series 20 W comparison.

Assembled Motor and Gearhead

The motor and gearhead come pre-assembled. This reduces assembly time and allows immediate installation of the unit to equipment.

You can remove the gearhead and change the mounting angle by 90-degree intervals. You can change the connector position depending on the equipment.

Types and Features of Gearheads

These high-strength gearheads support high-speed rotation and high outputs the brushless motors provide. You can choose from various gearheads to meet your application, requirements, or installation.

Right-Angle Shaft Gearhead

IP66

Hypoid Right-Angle Hollow Shaft **JH** Gear

Space Saving

Placing the motor at right angles saves space.

Cost Saving

Reduced couplings, belts, pulleys, and other parts contribute to reduced parts costs and assembling steps.

Unsaturated Permissible Torque

The permissible torque is not saturated even at a high gear ratio. Therefore, the benefit of the motor torque can be maximized.

BLM230HP-10S	BMUD30-A2	CC030HBLF	SOL2M4F	MCL301010	MAFP05V

The system configuration shown above is an example. Other combinations are available.

Product Line Connector Type

A motor, driver, connection cable need to purchase separately.

Motor

◇ Parallel Shaft Gearhead **GFV** Gear

Output Power	Product Name	Gear Ratio
30 W	BLM230HP-□S	5, 10, 15, 20
		30, 50, 100
		200
60 W	BLM460SHP-□S	5, 10, 15, 20
		30, 50, 100
		200
120 W	BLM5120HP-□S	5, 10, 15, 20
		30, 50, 100
		200
200 W	BLM6200SHP-□S	5, 10, 15, 20
		30, 50
		100, 200
400 W	BLM6400SHP-□S	5, 10, 15, 20
		30, 50

◇ Legged Gearhead **JB** Gear

Output Power	Product Name	Gear Ratio
200 W	BLM5200HPK-5AB□B-L	5, 10, 20
		30, 50
		100, 200
		300, 450
		600, 1200
400 W	BLM5400HPK-5AB□B-L	5, 10, 20
		30, 50
		100, 200
		300, 450
		600

◇ Parallel Shaft Gearhead **GFV** Gear Supports Food Machinery Grease H1

Output Power	Product Name	Gear Ratio
30 W	NEW BLM230HP-□SF	5, 10, 15, 20
		30, 50, 100
		200
60 W	NEW BLM460SHP-□SF	5, 10, 15, 20
		30, 50, 100
		200
120 W	NEW BLM5120HP-□SF	5, 10, 15, 20
		30, 50, 100
		200

◇ Hypoid Right-Angle Hollow Shaft **JH** Gear

Output Power	Product Name	Gear Ratio
60 W	NEW BLM460SHPK-4H□S	10, 15, 20
		30, 50, 100
		200
120 W	BLM5120HPK-5H□S	10, 15, 20
		30, 50, 100
		200
200 W	BLM5200HPK-5XH□S	5, 10, 15, 20
		30
		50
		100
		200
400 W	BLM5400HPK-5XH□S	5, 10, 15, 20
		30
		50
		100
		200

◇ Parallel Shaft Gearhead **JV** Gear

Output Power	Product Name	Gear Ratio
200 W	BLM5200HPK-5KV□S	300, 450
400 W	BLM5400HPK-5DV□S	100, 200
	BLM5400HPK-5KV□S	300, 450

◇ Round Shaft Type

Output Power	Product Name
30 W	BLM230HP-AS
60 W	BLM260HP-AS
120 W	BLM5120HP-AS
200 W	BLM5200HP-AS
400 W	BLM5400HP-AS

Lineup of Other Products

Round Shaft Type
Milling Cut Output Shaft
Connector Position 4-direction selection

● For details, contact your nearest Oriental Motor sales office.

Driver

Output Power	Power Supply Voltage	Product Name
30 W	Single-Phase 100-120 VAC	BMUD30-A2
	Single-Phase, Three-Phase 200-240 VAC	BMUD30-C2
60 W	Single-Phase 100-120 VAC	BMUD60-A2
	Single-Phase, Three-Phase 200-240 VAC	BMUD60-C2
120 W	Single-Phase 100-120 VAC	BMUD120-A2
	Single-Phase, Three-Phase 200-240 VAC	BMUD120-C2
200 W	Single-Phase 100-120 VAC	BMUD200-A
	Single-Phase, Three-Phase 200-240 VAC	BMUD200-C
400 W	Three-Phase 200-240 VAC	BMUD400-S

Connection Cables (For connector type)

Length	Product Name	Length	Product Name
0.5 m	CC005HBL ■	3 m	CC030HBL ■
1 m	CC010HBL ■	4 m	CC040HBL ■
1.5 m	CC015HBL ■	5 m	CC050HBL ■
2 m	CC020HBL ■	7 m	CC070HBL ■
2.5 m	CC025HBL ■	10 m	CC100HBL ■

● The ■ symbol in the product is replaced with **F** or **B** that represents the cable drawing direction.

Two types of connection cables for different cable drawing directions are provided.

Note

● The cable for the round shaft type draws only from the counter-output shaft side.

F: Drawing on the output shaft side

B: Drawing on the counter-output shaft side

● A number in the box □ in the product name indicates the gear ratio.

*1 For 200 W output only.

*2 The rotational speed of the output shaft is the value of the rotational speed divided by the gear ratio.

*3 It is also applicable when digitally setting the deceleration time to below 0.1 second.

◇ About Load Position

Speed – Torque Characteristics

Continuous Duty Region : Continuous operation is possible in this region.

Limited Duty Region : This region is used primarily when accelerating.

● 200 W

● 400 W

● The values correspond to each specification and characteristic of a stand-alone motor. The speed-torque characteristics shows the values when rated voltage is applied.

● The box in a product name is replaced with the code (A, C, E, K, S) that represents the gearhead size.
A number in the box in the product name indicates the gear ratio.

Hypoid Right-Angle Hollow Shaft JH Gear 60 W, 120 W

Common Specifications

Items	Specifications	
	30 W, 60 W, 120 W	200 W, 400 W
Speed Setting Methods	Digital setting by the dial 4 speed settings possible	
Acceleration/Deceleration Time	Analog setting: 0.1~15.0 s (Time setting from stopped state until reaching the rated speed) Common settings for acceleration/deceleration time with the use of acceleration/deceleration time potentiometer* Digital setting: 0.0~15.0 s (Time setting from current speed to the setting speed) Individual settings for acceleration time/deceleration time for each operating data* * Acceleration time/deceleration time varies with the load condition of the motor.	
Input Signals	Photocoupler input Input resistance: 5.7 kΩ Run by internal power supply: 5 VDC Connectable external DC power supply: 24 VDC -15~+20% 100 mA or more Sink input/Source input Supplied through external wiring	Photocoupler input Input resistance: 6.6 kΩ Run by internal power supply: 5 VDC Connectable external DC power supply: 24 VDC -15~+20% 100 mA or more Sink input/Source input Supplied through external wiring
Output Signals	Signals can be assigned randomly to X0~X2 inputs (3 points) [FWD], [REV], [MO], M1, ALARM-RESET, EXT-ERROR, H-FREE []: Initial setting	Signals can be assigned randomly to IN0~IN4 inputs (5 points) [FWD], [REV], [MO], [M1], [ALARM-RESET], EXT-ERROR, H-FREE []: Initial setting
Protective Function	Photocoupler and open collector output External power supply: 4.5~30 VDC 100 mA or less Sink output/Source output Supplied through external wiring	
Max. Extension Distance	When the following protective functions are activated, ALARM-OUT1 output turns OFF and the motor will undergo a coasting stop. At the same time, the alarm code will be displayed. (Instantaneous stop for external stop only) Overcurrent, main circuit overheating, overvoltage, undervoltage, sensor error, overload, overspeed, EEPROM error, initial sensor error, initial operation inhibition, external stop	
Time Rating	Motor and driver distance 10.5 m [When using an optional connection cable (for relay)] Continuous	

Overload alarm detection time
The overload alarm is generated if the operation goes beyond the continuous duty region.
The detection time for this overload alarm can be set from 0.1~60.0 seconds. (Initial setting: 30.0 seconds)
However, alarm will be generated within 5 seconds in the following cases:
· If an applied load goes beyond the limited duty region
· If the output shaft is locked

General Specifications

Items	Motor	Driver
Insulation Resistance	The measured value is 100 MΩ or more when 500 VDC megger is applied between the windings and the case after continuous operation under normal ambient temperature and humidity.	The measured value is 100 MΩ or more when 500 VDC megger is applied between the power supply terminal and the protective earth terminal, and between the power supply terminal and the I/O signal terminal after continuous operation under normal ambient temperature and humidity.
Dielectric Strength Voltage	Sufficient to withstand 1.5 kVAC at 50 Hz applied between the windings and the case for 1 minute after continuous operation under normal ambient temperature and humidity.	No abnormality is judged even with application of 1.5 kVAC at 50 Hz between the power supply terminal and the protective earth terminal, and with application of 1.5 kVAC at 50 Hz between the power supply terminal and the I/O terminal, for 1 minute after continuous operation under normal ambient temperature and humidity.
Temperature Rise	Temperature rise of the windings is 50° C max. (60° C or less for 400 W) and that of the case is 40° C max. (50° C or less for 400 W)*1, measured by the thermocouple method after rated continuous operation under normal ambient temperature and humidity.	Temperature rise of the heat sink is 50° C or less measured by the thermocouple method after rated continuous operation under normal ambient temperature and humidity.
Operating Environment	Ambient Temperature	0~+40° C (Non-freezing)
	Ambient Humidity	85% or less (Non-condensing)
	Altitude	Up to 1000 m above sea level
	Atmosphere	No corrosive gases or dust. The product should not be exposed to oil. Cannot be used in a radioactive area, magnetic field, vacuum, or other special environments.
Storage Condition*2	Vibration	Not subject to continuous vibration or excessive shock. Conforms to JIS C 60068-2-6 "Sine-wave vibration test method" Frequency range: 10~55 Hz, Pulsating amplitude: 0.15 mm, Sweep direction: 3 directions (X, Y, Z), Number of sweeps: 20 times
	Ambient Temperature	-20~+70° C (-10~+60° C for JV Gear, JB Gear, JH Gear) (Non-freezing)
	Ambient Humidity	85% or less (Non-condensing)
	Altitude	Up to 3000 m above sea level (Up to 1000 m above sea level for JV Gear, JB Gear, JH Gear)
Heat-resistant Class	UL/CSA Standards: 105 (A), EN Standards: 120 (E)	
Degree of Protection*3	Cable Type: IP40 Connector Type GFV Gear, JH Gear, JV Gear, Round shaft: IP66 (Except the installation surface of the round shaft type) JB Gear: IP44 (Except the connector for driver connection when a cable is connected)	IP20

*1 For round shaft types, attach to a heat sink (material: aluminum) of one of the following sizes to keep the motor case surface temperature from exceeding 90° C.

30 W type: 115×115 mm Thickness 5 mm, 60 W type: 135×135 mm Thickness 5 mm, 120 W type: 165×165 mm Thickness 5 mm,

200 W type: 200×200 mm Thickness 5 mm, 400 W type: 250×250 mm Thickness 6 mm

*2 The storage condition applies to short periods such as the period during transportation.

*3 The IP indication representing the dust-resistant and watertight performances are defined in IEC 60529 and IEC 60034-5.

Note

● Do not measure insulation resistance or perform a dielectric strength test while the motor and driver are connected.

Materials and Surface Treatment of IP66 Specifications (Motors/Gearheads)

- Material Case: Aluminum, Output shaft: Stainless steel, and Screws: Stainless steel (Externally exposed portion only, except for the protective earth terminal)
- Surface Treatment Case: Coated (except for the installation surfaces of the **GFV** gears and round shaft types)

Dimensions (Unit = mm)

● Motor (Cable type)

● "Mounting screws" are included. Dimensions of Installation Screws → Page 45

● A number in the box □ in the product name indicates the gear ratio.

● Installation screw: Includes 4 plain washers and 4 spring washers each.
The installation screw material is stainless steel.

● A number in the box □ in the product name indicates the gear ratio.

Connection and Operation (30 W, 60 W, 120 W)

Names and Functions of Driver Parts

Front side of the driver

Back side of the driver

When Front Panel is Removed

Extended Functions

Remove the front panel to be able to perform various settings by operating the keys.

Operating Mode	Details
Monitoring	Rotation speed, load factor, operating data No., alarm, warning, I/O monitor
Data	Data 4 points Rotation speed, acceleration time, deceleration time, reset
Parameters	Gear ratio, speed increasing ratio, initial panel indication, initial operation inhibition alarm, prohibition alarm of operation at the initial setting release method selection, analog acceleration/deceleration, upper and lower limits of speed setting function, easy holding function, external operating signal input, input function selection, output function selection, overload alarm detection time except during axial lock, overload warning level, speed attainment width, parameter mode reset

Main Power Connector (CN1)

Connects to the main power supply. Connect a power supply that matches with the power supply voltage to be used.

•Single-Phase 100-120 VAC

•Single-Phase 200-240 VAC

•Three-Phase 200-240 VAC

•Applicable Lead Wire Size
AWG18~14 (0.75~2.0 mm²)

Operation with the Driver only

Run/Stop

When the operating switch is set to the "RUN" position, the motor will start.
When it is returned to the "STAND-BY" position, the motor decelerates to a stop.

Speed Setting Method

Set the motor speed by using the dial.

Turning the dial slowly to the right increases the speed by 1 r/min increments, while turning it to the left reduces the speed by 1 r/min increments.

Turning the dial fast produces a great variation in speed.

Pressing the dial sets the speed.

Operating Switch

● Operation by External Signals

◇ Operating Method

- Using the built-in power supply in the driver, the motor is operated through external signals (switched, relays, etc.).
Connect Pins No. 5~8 of the I/O signal connector (CN4) as in the figure to the right.
- For operation using external signals, change the parameter setting in the "External Operating Signal Input". For details, see the user's guide.
- Multiple speed operation is available in up to 4 levels.

- Pin No.8 (X0): FWD
- Pin No.7 (X1): REV
- Pin No.6 (X2): MO
- Pin No.5 (C1): IN-COM1 (0 V)

● I/O Signals Connector (CN4)

Pin No.	Terminal Name	Functions*	Description
9	C0	Input signal common (for external power supply)	Connect for external power supplies.
8	X0	[FWD]	During "ON", the motor rotates in the FWD direction.
7	X1	[REV]	During "ON", the motor rotates in the REV direction.
6	X2	[MO]	Select the operating data.
5	C1	0V (for internal power supply)	Connect for internal power supply.
4	Y0+	[SPEED-OUT]	For every rotation of the motor output shaft, 30 pulses are output.
3	Y0-		
2	Y1+	[ALARM-OUT1]	It turns OFF when an alarm is generated. (Normally closed)
1	Y1-		

*The [] indicates the functions assigned in the factory.

Among the following signals, the signals required for the 3 input signal terminals (X0~X2) and the 2 output signal terminals (Y0, Y1) can be assigned.

3 points for the 7 input signal points (FWD, REV, MO, M1, ALARM-RESET, EXT-ERROR, H-FREE)

2 points for the 6 input signal points (ALARM-OUT1, SPEED-OUT, ALARM-OUT2, MOVE, VA, WNG)

● Applicable Lead Wire Size

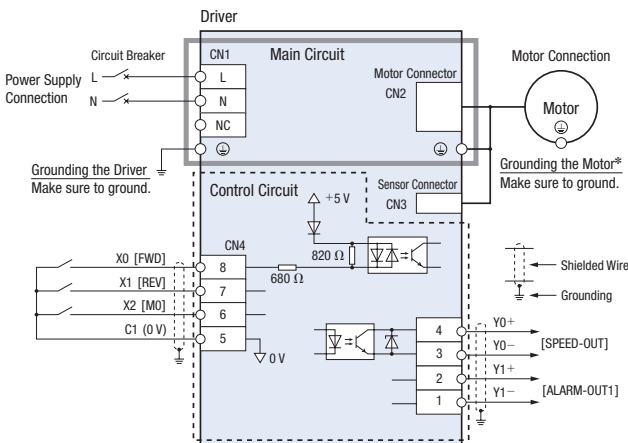

AWG26~20 (0.14~0.5 mm²)

◇ Connection Diagram

The diagrams are for a Single-Phase 100-120 VAC. I/O signals specified in [] are factory set signals.

● When using the built-in power supply

The figure shows a connection example for the operation of the motor using switches having contacts, such as switches or relays.

*Grounding the motor

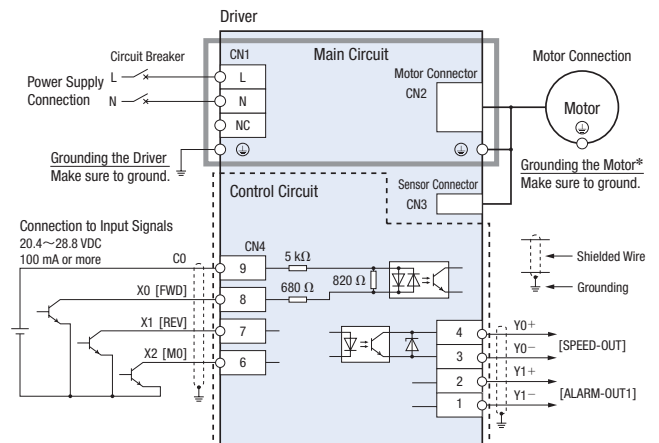

For the connector type: Motor cables may not satisfy the grounding resistance of the standard applied to the equipment depending on the type or the length.

To resolve this issue, make sure to install the motor close to the ground.

For the cable type: The motor cable does not have a protective earth wire. Make sure to ground using the protective earth terminal for the motor.

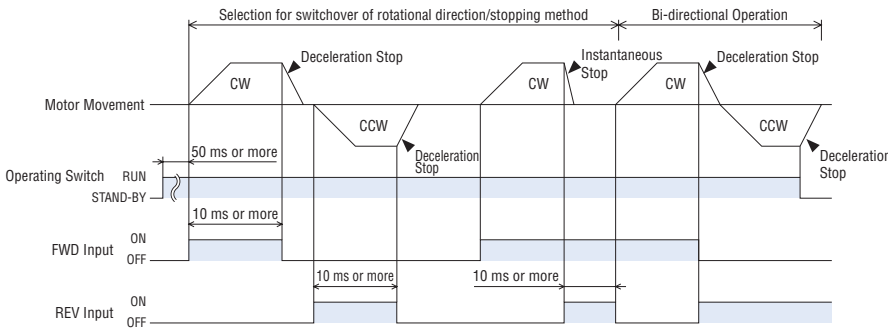

● When using external power supply

The figure shows a connection example when the motor is operated in a sequential connection with transistors.

◇ Timing Chart

This is a timing chart when the "External operating signal input" parameter is set to "ON" and the rotation direction switch to "FWD".

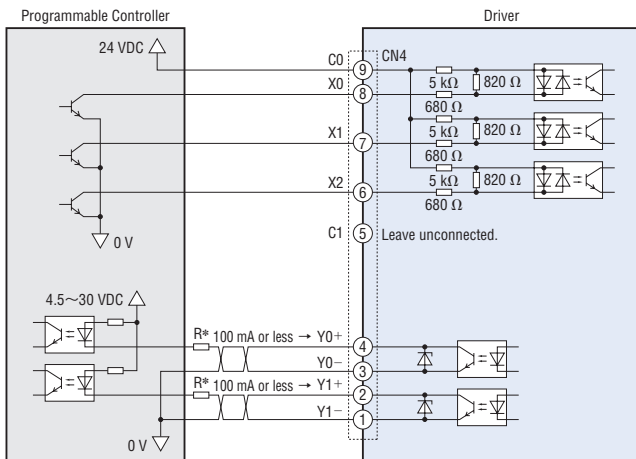

- Switching the FWD input to ON will cause the motor to turn clockwise as viewed from the motor shaft side, while switching the REV input to ON will cause the motor to turn counterclockwise. Turning it OFF decelerates the motor to a stop.
- If both the FWD input and REV input are turned ON simultaneously, the motor will stop instantaneously.
- The rotation direction varies depending on the gear ratio of the gearhead.

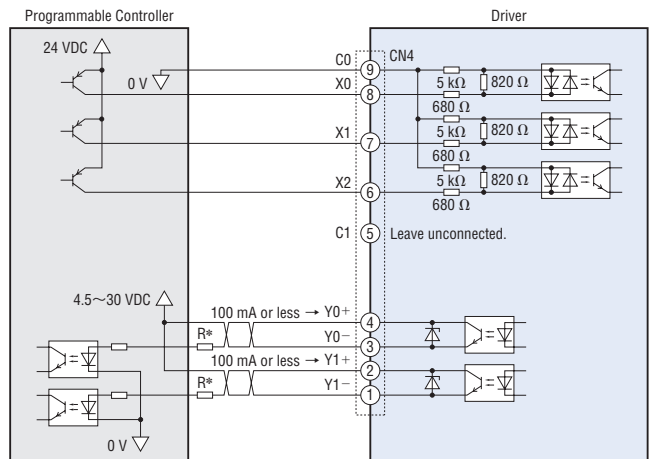

◇ Example of Connection of I/O Signals with the Host Controller

This is a connection example for the operation of the motor using the host controller of the transistor output type.

● Sink Logic

● Source Logic

*Recommended resistance Value
 For 24 VDC: 680 Ω~2.7 kΩ (2 W)
 For 5 VDC: 150 Ω~560 Ω (0.5 W)

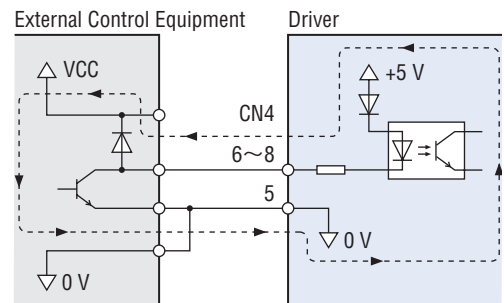

Note

The current applied to Y0 and Y1 must be 100 mA or less. If this value is exceeded, connect the limiting resistance R.

◇ When an External Control Equipment with a Built-in Clamp Diode is used

With external control equipment with built-in clamping diodes connected, if the power of the external control equipment is turned off with the driver turned on, the motor may rotate due to current flowing around. The motor may also rotate even if the driver and the external control equipment are simultaneously turned ON/OFF because these two devices have different current capacities.

To turn off the power, first turn off the driver and then the external control equipment.
 To turn on the power, first turn on the external control equipment and then the driver.

◇ When using for the Multiple Speed Operation

By switching the ON/OFF of the M0 or M1 input, the multiple speed operation becomes available.

● Example of operating conditions

Operating Data No.	M0	M1	Speed [r/min]
0	OFF	OFF	3000
1	ON	OFF	1000
2	OFF	ON	2000
3	ON	ON	500

Connection and Operation (200 W, 400 W)

Names and Functions of Driver Parts

Indication

Displays the monitor contents, alarm, etc.

Dial

Changes the speed and parameters. The value is set when the dial is pressed after changes are made.

Front side of the driver

Operating Switch

The motor is started by setting it to the "RUN" position. Setting it to the "STAND-BY" position stops the motor.

Rotation Direction Switch

Change the rotation direction of the motor.

Front Panel

Back side of the driver

Sensor Connector (CN3)

Connects to the sensor connector (black) of the motor.

I/O Signal Connector (CN4)

Connects with the I/O signals.

Motor Connector (CN2)

Connects to the motor connector (white) of the motor.

Main Power Connector (CN1)

Connects to the main power supply.

Protective Earth Terminals (2 locations)

Ground either one of the protective earth terminals.

When Front Panel is Removed

MODE Key

Changes the operating mode.

FUNCTION Key

Changes the indication and functions for the operating mode.

Acceleration/Deceleration Time Potentiometer

Sets the acceleration time for starting the motor and deceleration time for motor standstill. Setting range: 0.1 s~15.0 s

Installation Holes (2 places)

Extended Functions

Remove the front panel to be able to perform various settings by operating the keys.

Turning the dial fast produces a great variation in speed.

Pressing the dial sets the speed.

Operation with the operating switch

Setting the speed with the dial

Operating Switch

● Operation by External Signals

◇ Operating Method

- Using the built-in power supply in the driver, the motor is operated through external signals (switched, relays, etc.). Connect Pins No. 1~5 and No. 7 of the I/O signal connector (CN4) as in the table below.
- For operation using external signals, change the parameter setting in the "External Operating Signal Input". For details, see the user's guide.
- Multiple speed operation is available in up to 4 levels.

● I/O Signals Connector (CN4)

Pin No.	Signal Name	Functions*	Description
1	IN4	[ALARM-RESET]	Alarms are reset.
2	IN3	[M1]	Select the operating data.
3	IN2	[M0]	
4	IN1	[REV]	During "ON", the motor rotates in the REV direction.
5	IN0	[FWD]	During "ON", the motor rotates in the FWD direction.
6	IN-COM0	Input signal common (for external power supply)	Connect for external power supplies.
7	IN-COM1	0V (for internal power supply)	Connect for internal power supply.
8	N.C.	N.C.	Leave unconnected.
9	OUT1-	[ALARM-OUT1]	It turns OFF when an alarm is generated. (Normally closed)
10	OUT1+		
11	OUT0-	[SPEED-OUT]	For every rotation of the motor output shaft, 30 pulses are output.
12	OUT0+		

CN4

● Applicable Lead Wire Size

AWG24~18 (0.2~0.75 mm²)

*The [] indicates the functions assigned in the factory.

Among the following signals, the signals required for the 5 input signal terminals (IN0~IN4) and the 2 output signal terminals (OUT0, OUT1) can be assigned.

5 points for the 7 input signal points (FWD, REV, M0, M1, ALARM-RESET, EXT-ERROR, H-FREE)

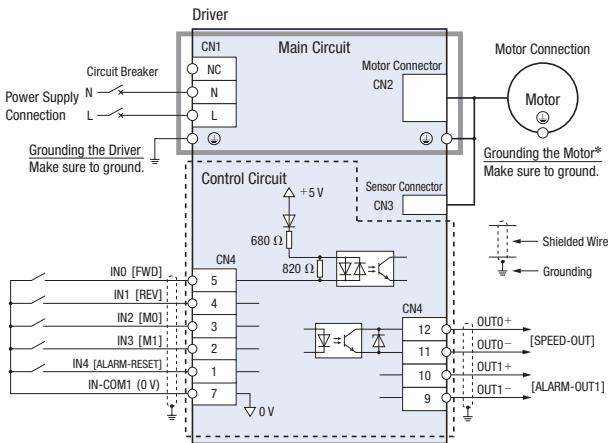

2 points for the 6 input signal points (ALARM-OUT1, SPEED-OUT, ALARM-OUT2, MOVE, VA, WNG)

◇ Connection Diagram

The diagrams are for a Single-Phase 100-120 VAC. I/O signals specified in [] are factory set signals.

● When using the built-in power supply

The figure shows a connection example for the operation of the motor using switches having contacts, such as switches or relays.

*Grounding the motor

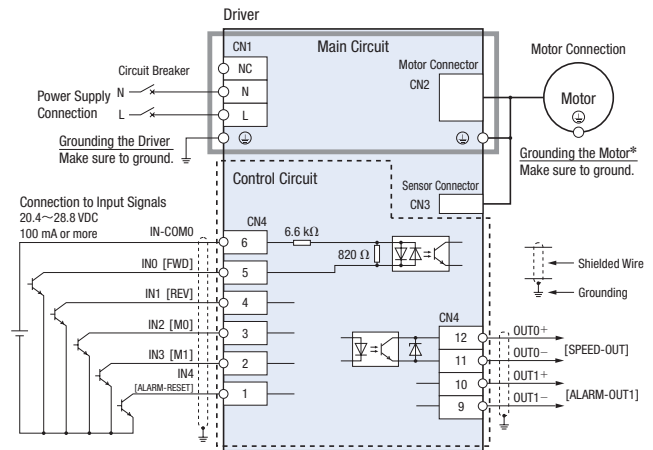

For the connector type: Motor cables may not satisfy the grounding resistance of the standard applied to the equipment depending on the type or the length.

To resolve this issue, make sure to install the motor close to the ground.

For the cable type: The motor cable does not have a protective earth wire. Make sure to ground using the protective earth terminal for the motor.

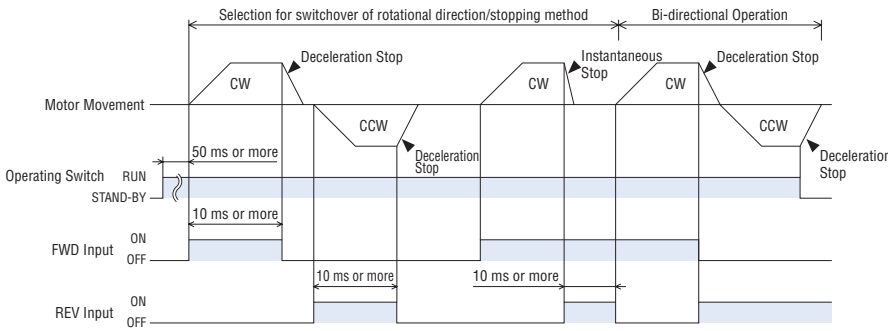

● When using external power supplies

The figure shows a connection example when the motor is operated in a sequential connection with transistors.

◇ Timing Chart

This is a timing chart when the "External operating signal input" parameter is set to "ON" and the rotation direction switch to "FWD".

- Switching the FWD input to ON will cause the motor to turn clockwise as viewed from the motor shaft side, while switching the REV input to ON will cause the motor to turn counterclockwise. Turning it OFF decelerates the motor to a stop.
- If both the FWD input and REV input are turned ON simultaneously, the motor will stop instantaneously.
- The rotation direction varies depending on the gear ratio of the gearhead.

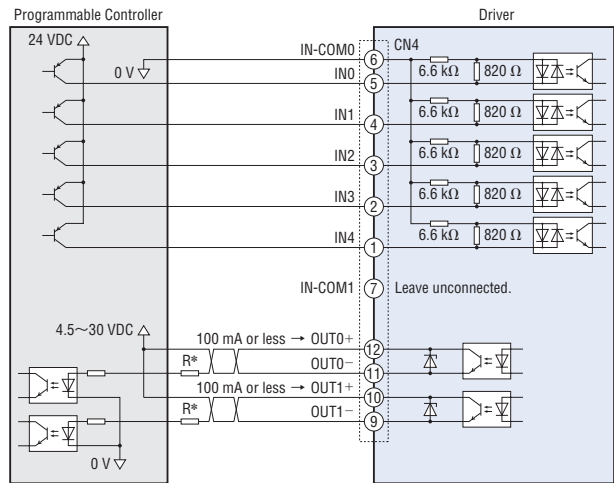

◇ Example of Connection of I/O Signals with the Host Controller

This is a connection example for the operation of the motor using the host controller of the transistor output type.

● Sink Logic

● Source Logic

*Recommended resistance Value
 For 24 VDC: 680 Ω~2.7 kΩ (2 W)
 For 5 VDC: 150 Ω~560 Ω (0.5 W)

Note

The current applied to OUT0 and OUT1 must be 100 mA or less. If this value is exceeded, connect the limiting resistance R.

◇ When an External Control Equipment with a Built-in Clamp Diode is used

With external control equipment with built-in clamping diodes connected, if the power of the external control equipment is turned off with the driver turned on, the motor may rotate due to current flowing around. The motor may also rotate even if the driver and the external control equipment are simultaneously turned ON/OFF because these two devices have different current capacities.

To turn off the power, first turn off the driver and then the external control equipment.
 To turn on the power, first turn on the external control equipment and then the driver.

◇ When using for the Multiple Speed Operation

By switching the ON/OFF of the M0 or M1 input, the multiple speed operation becomes available.

● Example of operating conditions

Operating Data No.	M0	M1	Speed [r/min]
0	OFF	OFF	3000
1	ON	OFF	1000
2	OFF	ON	2000
3	ON	ON	500

Installation of Hollow Shaft Load

● Example of Load Shaft Installation Method

The load installation method differs depending on the shape of the load shaft. See the figures below.

- The hollow output shaft is processed to a tolerance of the inner diameter H8, and incorporates a key slot for load shaft installation.
- The recommended tolerance of the load shaft is h7.

Note

- To prevent sticking, apply a coat of grease on the exterior surface of the load shaft and interior surface of the hollow output shaft.

◇ Stepped Load Shaft

● Fixing method using the end plate

● Fixing method using the retaining ring for hole

◇ For Non-Stepped Load Shaft

◇ Recommended Load Shaft Installation Method

Unit: mm

Output Power	60 W	120 W	200 W, 400 W	
Gear Ratio	10~200	10~200	5~50	100, 200
Inner Diameter of Hollow Output Shaft (H8)	$\phi 12^{+0.027}_0$	$\phi 15^{+0.027}_0$	$\phi 25^{+0.033}_0$	$\phi 30^{+0.033}_0$
Recommended Tolerance of Load Shaft (h7)	$\phi 12^0_{-0.018}$	$\phi 15^0_{-0.018}$	$\phi 25^0_{-0.021}$	$\phi 30^0_{-0.021}$
Screw Size	M5	M6	M6	M8
Spacer Dimensions	Outer Diameter	$\phi 11.5$	$\phi 14.5$	$\phi 24.5$
	Inner Diameter	$\phi 6$	$\phi 7$	$\phi 7$
	Width	3	3	4
Nominal Hole Diameter of Retaining Ring (C type retaining ring)	$\phi 12$	$\phi 15$	$\phi 25$	$\phi 30$
End Plate Thickness	3	3	4	5
Stepped Shaft La length	55	72	96	96

- Retaining rings for holes, spacers, screws or other parts used to install the load shaft are not supplied.

◇ Recommended Load Shaft Length

● Permissible Radial Load Calculation of the Hollow Shaft Type

Formulas to calculate permissible radial loads vary depending on the mechanism.

◇ When One End of the Load Shaft is Not Supported by a Bearing Unit

● 60 W

$$\text{Permissible Radial Load } W [\text{N}] = \frac{68.5}{48.5 + L_p} \times F_0$$

● 120 W

$$\text{Permissible Radial Load } W [\text{N}] = \frac{79}{59 + L_p} \times F_0$$

● 200 W, 400 W (Gear ratio **5~50**)

$$\text{Permissible Radial Load } W [\text{N}] = \frac{95.5}{75.5 + L_p} \times F_0$$

● 200 W, 400 W (Gear ratio **100, 200**)

$$\text{Permissible Radial Load } W [\text{N}] = \frac{102}{82 + L_p} \times F_0$$

◇ When One End of the Load Shaft is Supported by a Bearing Unit

● 60 W

$$\text{Permissible Radial Load } W [\text{N}] = \frac{68.5(S+5.5)}{53(S-L_p)} \times F_0$$

● 120 W

$$\text{Permissible Radial Load } W [\text{N}] = \frac{79(S+4)}{65(S-L_p)} \times F_0$$

● 200 W, 400 W (Gear ratio **5~50**)

$$\text{Permissible Radial Load } W [\text{N}] = \frac{95.5(S-9)}{104.5(S-L_p)} \times F_0$$

● 200 W, 400 W (Gear ratio **100, 200**)

$$\text{Permissible Radial Load } W [\text{N}] = \frac{102(S-9)}{111(S-L_p)} \times F_0$$

F_0 [N]: Permissible radial load when the reference point is at 20 mm from the installation surface.

L_p [mm]: Distance from the installation surface to the load point.

S [mm]: Distance from the installation surface to the bearing unit.

● For details on the permissible radial load when the reference position is 20 mm away from the flange installation surface, see the Specifications table. → Pages 22 and 24
