U-PVC RAINGUTTER R220

ROYAL SERIES GUTTER SYSTEM

INDUSTRIAL DESIGN No.:
MY11-00800-0103

Everplast is proud to introduce its unique design of the EVERPLAST ROYAL SERIES UPVC GUTTER SYSTEM. The unique design of the gutter profile has a large water capacity to prevent water from overflow. This also ensures that it copes better with sudden downpours, as well as decreasing the likelihood of leaf and sediment build-up.

The ROYAL SERIES GUTTER SYSTEM is manufactured from a special formulated UPVC material through research and testing which allow the gutters to have long-lasting lifetime with minimum maintenance. The formulation used has been designed for high impact performance and excellent stability against harsh climatic conditions.

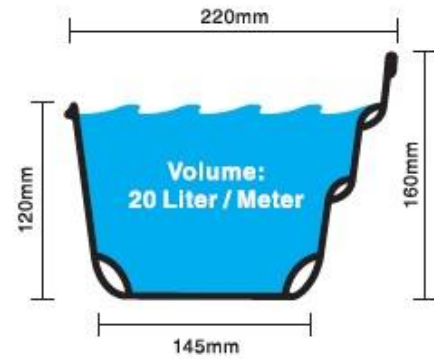

Four hexagonal callouts with white borders and red arrows pointing to specific features of the gutter system. 1. Top-left: A hand holding a gutter section, with the text 'STRONG & SOLID' below. 2. Top-right: A close-up of the gutter's wide, curved profile with a red double-headed arrow indicating a width of '22CM', with the text 'HUGE WATER CAPACITY' below. 3. Bottom-left: A close-up of the gutter's internal structure, with the text 'HIGH DURABILITY' below. 4. Bottom-right: A close-up of the gutter's joint, with a red arrow pointing to the seal, and the text 'UV PROTECTED' below.

BENEFITS

- ✓ Corrosion free material
- ✓ Large water capacity
- ✓ Special formulated material with UV resistant
- ✓ Simplified jointing concept
- ✓ Gutter profile with high front design, helps to hide untidy roof lines
- ✓ Easy flow design
- ✓ Light weight, easy to install
- ✓ No expensive tooling required for installation
- ✓ Can be painted easily to complement any colour scheme
- ✓ Large water capacity (Volume: 20 Litre/meter)

Gutter Profile

Royal Series Gutter (R220)

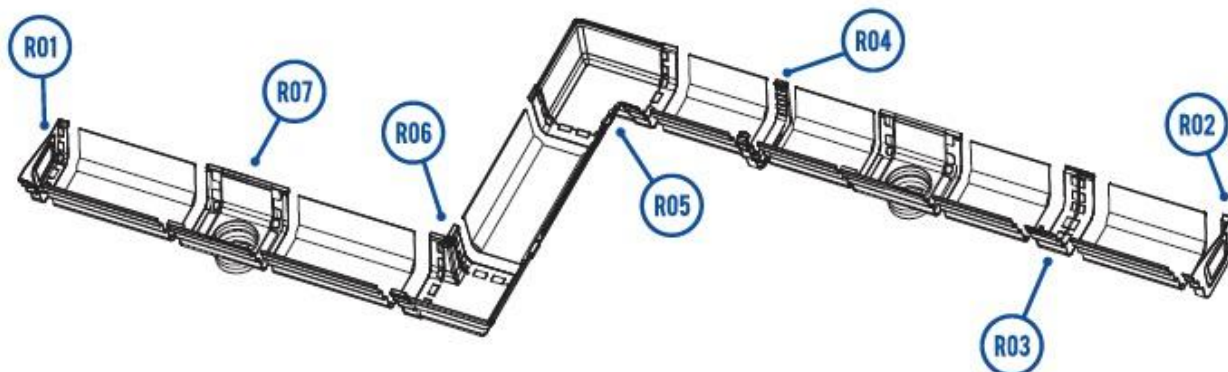

Length: 5800mm
