

PID CONTROLLER PID 2303-1C

PV = Process value

SV = Set value

TECHNICAL SPECIFICATION

INPUT SPECIFICATION:

| | Input | Range | |
|-------------|-------------------------------|---------------|--|
| Input Types | J | 0 to 400°C | |
| | K | 0 to 500°C | |
| | 1 CT | 0.0 to 30.0 A | |
| Resolution | J,K = 1°C | | |
| Indication | ±1% of FSD ± 1°C | | |
| Accuracy | (FSD:- full scale deflection) | | |

DISPLAY AND KEYS:

| | Upper: 4 digit, 7 seg 0.56" white LED |
|---------|---|
| Display | Middle: 4 digit, 7 seg, 0.31" green LED |
| | Lower: 3 digit, 7 seg, 0.39" red LED |
| Keys | SET, INC, DEC, ENT |

DIMENSION:

| Size (mm) | 72 (H) x 72 (W) x 85 (D) mm |
|---------------------|-----------------------------|
| Panel Cutout | 68 (H) x 68 (W) mm |

CONTROL METHOD:

| Heating | 1) PID control with Auto-Tuning |
|---------|---|
| | 2) ON-OFF control |
| Cooling | BL.TP (Blower Time Proportion) ON-OFF control |
| Alarm | Heater break alarm, Cold start, High, Absolute low, Inband, Absolute outband |

OUTPUT SPECIFICATION:

| Relay Output | | |
|------------------|---|--|
| Relays | 3 Nos | |
| Relay Type | 1^{st} Relay 1C/O & 2^{nd} & 3^{rd} Relay (NO-C) | |
| Rating | 10A,230V AC/28V DC | |
| SSR Drive Output | | |
| Output Signal | 24V DC, 30mA DC (On-Off condition) | |
| | Relay 1 parallel to SSR | |

POWER SUPPLY:

| Supply Voltage | 100 to 250V AC, 50-60Hz |
|------------------------------|-------------------------|
| Power Consuption (VA Rating) | Approx 6VA @ 230V AC |

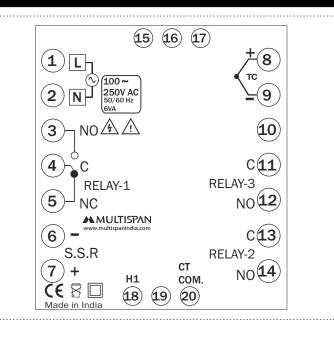

ENVIRONMENT CONDITION:

| Operating Temp. | 0°C to 55°C |
|-------------------|--|
| Relative Humidity | UP to 95% RH (non-condensing) |
| Protection Level | IP-65 (Front side) As per IS/IEC 60529 : 2001 |

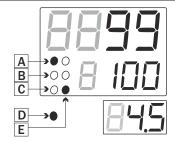

MECHANICAL INSTALLATION

| Outline Dimension (mm) | Panel Cutout Dimension (mm) |
|------------------------|--------------------------------|
| 72 | 68 |

TERMINAL CONNECTION

STATUS LED DESCRIPTION

- A Control output 1 indication (Heating)
- B Control output 2 indication (Cooling)
- C Alarm output indication
- D Heater current indication
- E Auto tuning ON indication

KEY OPERATION

| FUNCTION | PRESS KEY | |
|----------------------------------|---------------------|--|
| OPERATOR MODE | | |
| To enter in parameter setting | Press set for 4 sec | |
| For start/stop PID auto tuning | Press for 6 sec | |
| To go in factory setting mode | + Press 3 sec | |
| PARAMETER SETTING MODE | | |
| To set parameter value | SET | |
| To increment parameter value. | \triangle | |
| To decrement parameter value. | \bigcirc | |
| Set parameter to be save & exit. | ENT | |

SAFETY PRECAUTION

All safety related codifications, symbols and instructions that appear in this operating manual or on the equipment must be strictly followed to ensure the safety of the operating personnel as well as the instrument.

If all the equipment is not handled in a manner specified by the manufacturer, it might impair the protection provided by the equipment.

Read complete instructions prior to installation and operation of the unit.

WARNING: Risk of electric shock.

WARNING GUIDELINES

WARNING: Risk of electric shock.

- 1. To prevent the risk of electric shock power, supply to the equipment must be kept OFF while doing the wiring arrangement. Do not touch the terminals while power is being supplied.
- 2. To reduce electro magnetic interference, use wire with adequate rating and twists of the same of equal size shall be made with shortest connection.
- 3. Cable used for connection to power source, must have a cross section of 1mm or greater. These wires should have insulations capacity made of at least 1.5kV.
- 4. When extending the thermocouple lead wires, always use thermocouple compensation wires for wiring for the RTD type, use a wiring material with a small lead resistance $(5\Omega \text{ max per line})$ and no resistance differentials among three wires should be present.
- 5. A better anti-noise effect can be expected by using standard power supply cable for the instrument.

INSTALLATION GUIDELINES

- 1. This equipment, being built-in-type, normally becomes a part of main control panel and in such case the terminals do not remain accessible to the end user after installation and internal wiring.
- 2. Do not allow pieces of metal, wire clippings, or fine metallic fillings from installation to enter the product or else it may lead to a safety hazard that may in turn endanger life or cause electrical shock to the operator.
- 3. Circuit breaker or mains switch must be installed between power source and supply terminal to facilitate power 'ON' or 'OFF' function. However this mains switch or circuit breaker must be installed at convenient place normally accessible to the operator.
- 4. Use and store the instrument within the specified ambient temperature and humidity ranges as mentioned in this manual.

MECHANICAL INSTALLATION GUIDELINES

- 1. Prepare the panel cutout with proper dimensions as shown above.
- 2. Fit the unit into the panel with the help of clamp given.
- 3. The equipment in its installed state must not come in close proximity to any heating source, caustic vapors, oil steam, or other unwanted process byproducts.
- 4. Use the specified size of crimp terminal (M3.5 screws) to wire the terminal block. Tightening the screws on the terminal block using the tightening torque of the range of 1.2 N.m.
- 5. Do not connect anything to unused terminals.

MAINTENANCE

- 1. The equipment should be cleaned regularly to avoid blockage of ventilating parts.
- 2. Clean the equipment with a clean soft cloth. Do not use isopropyl alcohol or any other cleaning agent.
- 3. Fusible resistor must not be replaced by operator.

ERROR DISPLAY

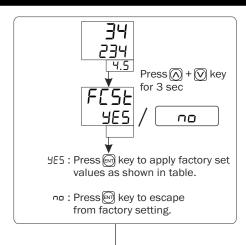

When an error has occurred the display indicates error codes as given below.

| ERROR | MEANING |
|-------|---|
| OPEn | Sensor is not connected or Over range condition or sensor break |
| 5-E | Sensor connection is reversed |

CORRECTIVE ACTION:

Check the sensor and the input wiring. If problem still exists, replace the sensor. And still if problem is not solved yet by the user, then please contact company person

FACTORY SETTING

| FACTORY SETTING | | |
|-----------------|--------------|--------|
| SR. | PARAMETER | VALUES |
| 1 | PB | 20.0°C |
| 2 | IT | 300 |
| 3 | DT | 75 |
| 4 | CT | 15 Sec |
| 5 | MR | 0°C |
| 6 | Offset | 0°C |
| 7 | Hysteresis1 | 3°C |
| 8 | Hysteresis 2 | 1°C |
| 9 | Alarm Time | 5 Sec |
| 10 | Hysteresis 3 | 30°C |

PARAMETER MESSAGE DESCRIPTION

| Parameter | Description |
|-----------|-------------------------------------|

WORKING

R1-Heating

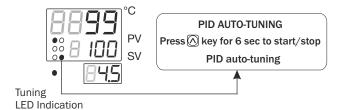

- 1) Control Mode PID: Relay turning ON/OFF according to heat requirement of the machine.
- 2) Control Mode ON/OFF: Relay turns ON (and remains ON) when PV < SV. Relay turns OFF when PV > SV. After this there may be overshoot depending on the thermal inertia of the machine. When the PV < SV Minus HYS, Relay turns ON and heating is resumed.

R2-Cooling

- 1) Cooling Time proportional Control action: Relay turns ON/OFF as per et Cycle timeand difference between PV and cooling SV.
- Cooling ON/OFF control action: Relay is initially OFF. When PV > SV, Relay turns ON and when PV < SV Minus HYS relay turns OFF.

Auto Tuning:-

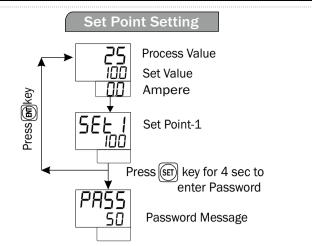

- → The Auto-tuning function automatically computes and sets the Proportional band (Pb), Integral time (It), Derivative time (dt), and cycle time as per process characteristics.
- → Tuning LED will turn "ON" during Auto-Tuning
- → If the power goes off before auto-tuning is completed, auto-tuning will be restarted at next power ON.

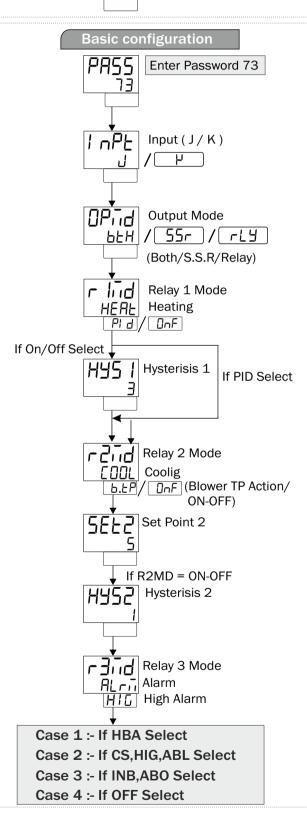

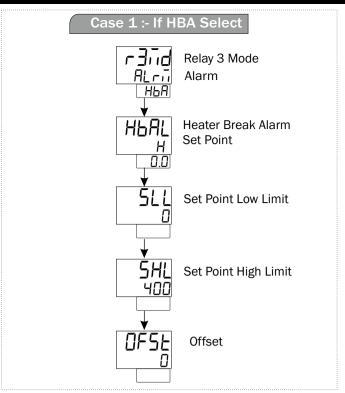

PARAMETER RANGE

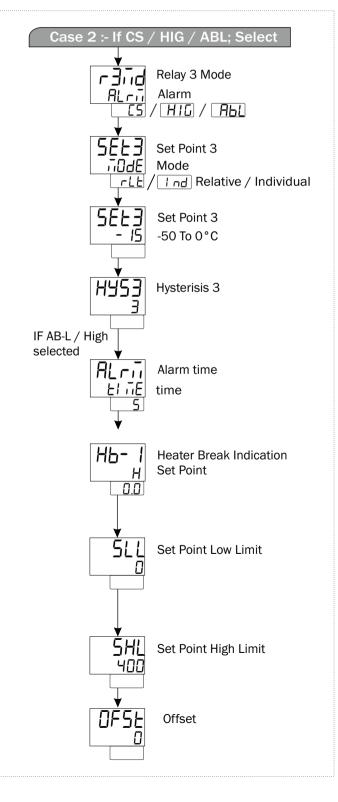

| Parameter | Range For J, K | | |
|--------------|------------------|------------|------------|
| PB | 0.0°C to 999.9°C | | |
| IT | 0 to 9999 | | |
| DT | 0 to 9999 | | |
| СТ | 4 sec to 99 sec | | |
| MR | -9 to +9 | | |
| Pb2 | 2°C to 20°C | | |
| Ct2 | 4°C to 99°C | | |
| Mr2 | -9°C to 9°C | | |
| Alarm Time | 0 Sec to 99 Sec | | |
| Hysteresis-1 | 1°C To 100°C | | |
| Hysteresis-2 | 1°C to 50°C | | |
| Hysteresis-3 | 1°C to 100°C | | |
| Set 2 | 1°C to 50°C | | |
| Offset | -20°C to 20°C | | |
| HBAL/HBI H | 0.0 to 30.0A | | |
| Set 3 | R3MD = CS | S3MD = RLT | -50 to 0 |
| | | S3MD = IND | 0 to set 1 |
| | R3MD = HIG/ | S3MD = RLT | -50 to +50 |
| | ABL | S3MD = IND | SLL to SHL |
| Set 3 Low | SLL To SET3 HIGH | | |
| Set 3 High | SET3 LOW To SHL | | |

ALARM OPERATION

R3-Alarms

- Heater Break alarm: If the current of the Heater < AMP SV (unhealthy condition) then Relay turns ON and Upper Display will show hbr, middle display will blink showing h. To manually turn off Relay, press ENT key 4 sec. Display will continue showing hbr till the fault is rectified.
- 2) Cold start (CS) alarm: Relay is initially OFF. When PV > Alarm SV, Relay turns ON. When PV < Alarm SV MINUS HYS, Relay turns OFF.
