

**UNIVERSAL
BOLT & NUT**

HEAVY DUTY BUCKET TEETH

Built For Tough Digging Applications

Premium Wear Parts For
Excavators, Loaders &
Earthmoving Equipment

KEY FEATURES

High Wear Resistance

Made to withstand heavy abrasion during digging, loading, and excavation work

Better Penetration

Sharp and durable tooth design helps improve digging efficiency and reduce machine effort

Heavy-Duty Construction

Suitable for excavators, loaders, and other earthmoving equipment used in construction, mining, and quarry work

Easy Replacement

Bucket teeth can be removed and replaced easily when worn out, helping reduce downtime

Secure Pin Locking System

Comes with pin and retainer system to keep the tooth firmly in place during operation

Extended Service Life

Longer life and reduce downtimes and operation cost

PRODUCT OVERVIEW

Designed for tough excavation and earthmoving applications, bucket teeth improve digging efficiency, penetration performance, and overall machine productivity.

Made from high-strength alloy steel, they are built to withstand abrasion, impact, and harsh working conditions while reducing downtime and extending service life.

APPLICATIONS

Excavators

Construction Projects

Quarry Operations

Loaders

HOW TO REPLACE & CHANGE BUCKET TEETH

01

Prepare Tools

02

Remove Pin

03

Remove Old Tooth

04

Cleaning Packed Dirt & Rust & Hardened Debris

05

Install New Teeth & Pin

06

Complete
