## NOTE:

Illustrations show the projector installed using optional ceiling mount bracket ET-PKV100H and bracket assembly ET-PKV100B.
This illustration is not drawn to scale

## Caution:

- All construction work should be done by a qualified technician.
- When mounting to the ceiling, use the special mounting bracket. To prevent the projector from swaying or dropping, attach the wire that is included with the projector between the mounting bracket and the ceiling.

* Lens performance cannot be guaranteed for projection sizes larger than 8.0 m ( 26.2 ft ).

## NOTE:

- The value for $L$ (distance to screen) varies slightly depending on the zoom lens characteristics.
- At the shortest projection distance, the zoom lens characteristics may cause slight image distortion.

## Calculation of the projection distance

For a screen size different from the above, use the equation below to calculate the projection distance.

```
Aspect ratio 4:3
minimum L (m) = (diagonal screen size in inches) \times 0.0242-0.0334
maximum L (m) = (diagonal screen size in inches) }\times0.0391-0.032
```

NOTE:
Distances calculated with the above equations will include a slight error.

## Installable angle

Install the projector at an angle within the range shown below.

## - Vertical direction

The projector may be installed at a vertical angle of $40^{\circ}$.

## - Horizontal direction

The projector may be installed at a horizontal angle of $20^{\circ}$.

## List of compatible signals

The signals that can be input to this projector are shown in the table below. Horizontal scanning frequencies of 25 kHz to 80 kHz ( 15 kHz to 100 kHz for RGB signals), vertical scanning frequencies of 50 Hz to 120 Hz ( 50 Hz to 100 Hz for RGB signals), and a dot clock of 162 MHz maximum ( 140 MHz maximum for RGB signals) can be input.

NOTE: The native resolution of this projector is $1,024 \times 768$ pixels. If the display resolution of the input signal is different from the native resolution, image compression or expansion will be used to convert the input signal to a level within the native resolution.

## Serial connector

The serial connector complies with RS-232C. To control the projector from a personal computer, commands must be input through communication software, based on the format and satisfying the communication conditions shown below.

Pin assignments and signal names

D-sub 9-pin (male) Serial input

| No. | Signal name | Description | No. | Signal name | Description |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 1 | - | NC | 6 | - | NC |
| 2 | TXD | Send data | 7 | - | NC |
| 3 | RXD | Receive data | 8 | - | NC |
| 4 | - | NC | 9 | - | NC |
| 5 | GND | Ground |  |  |  |

## Communication conditions (factory setting)

| Signal level | RS-232C-compliant |
| :--- | :--- |
| Synchronization method | Start-stop synchronization |
| Baud rate | 19,200 bps |
| Parity | None |

| Character length | 8 bits |
| :--- | :--- |
| Stop bit | 1 bit |
| $X$ parameter | None |
| S parameter | None |

## Basic format

Transmission from the computer begins with STX, then command, parameter, and ETX are sent in this order. Add parameters according to the details of control.

NOTE: When sending commands without parameters, a colon (:) is not necessary.

## Basic format with sub-commands

NOTE: When sending sub-commands that require no parameters, operation (E) and parameters are not necessary.

## CAUTION

- It may not be possible to send or receive commands for about $\mathbf{1 0}$ to $\mathbf{6 0}$ seconds when the lamp is first turned on. If this occurs, wait for $\mathbf{6 0}$ seconds, then try sending or receiving again.
- When sending multiple commands, be sure to wait for at least 0.5 second after receiving a response from the projector before sending the next command.
- Additional time is sometimes required for response due to processing inside the projector. Set the time-out period for command response to 10 seconds or more

*1 Do not send PON, POF, or OSH commands continuously in a short period of time. Doing so may burst the lamp or shorten the lamp replace ment cycle.
*2 These commands are effective when the standby mode is set to eco. (Other commands are not effective.)

## Status request commands

| Command | Description |  | Callback <Parameter> |
| :---: | :---: | :---: | :---: |
| QPW | Standby power status |  | <power condition> |
| Q \$ S | Lamp status |  | <lamp condition> |
| QIN | Input signal status |  | <input signal> |
| QAV | Volume adjustment value |  | <pl> |
| QPM | Picture mode status | Standard | STD |
|  |  | Dynamic | DYN |
|  |  | Cinema | CIN |
|  |  | Real | REA |
|  |  | Blackboard | BBD |
|  |  | Colorboard | CBD |
|  |  | Image 1 | IM1 |
|  |  | Image 2 | IM2 |
|  |  | Image 3 | IM3 |
|  |  | Image 4 | IM4 |
| QFZ | Freeze status |  | <off_on> |
| Q \$ L | Lamp run time |  | <acctch> |
| QSH | AV mute function status |  | <off_on> |

NOTE: If a wrong command is received, the projector will send an ER401 command to the computer.

## Parameter format

| Parameter format | Size (Byte) | Definition |
| :---: | :---: | :---: |
| <pl> | 3 (1 or 2 bytes also possible when under control) | Decimal without signs: 0 to 999 (000, 001, 002...999) <br> Decimal with signs: -99 to $+99(-99 \ldots-01,+00,+01,+02 \ldots+99)$ Callback from the projector is 3 Byte. |
| <off on> | 1 | 0 = off, 1 = on |
| <input signal> | 3 | ```HD1 = HDMI, RG1 = computer 1, RG2 = computer 2, VID = video, SVD = S-Video``` |
| <power condition> | 3 | 000 = power off (standby mode off), 001 = power on (standby mode on) |
| <lamp condition> | 1 | 0 = standby, 1 = lamp on under control, 2 = lamp on, 3 = lamp off under control |
| <acctch> | 4 | Decimal without signs: 0000-9999 hours |

## Command example

To set the volume to +30 , send the command as shown below.

NOTE: When sending commands without parameters, a colon (:) is not necessary.

## Notes on projector placement and operation

The projector uses a high-wattage lamp that becomes very hot during operation. Please observe the following precautions.

1. Never place objects on top of the projector while it is operating.
2. Make sure there is the unobstructed space as shown below or more around the projector's exhaust openings. In addition to this space, also ensure that there is a sufficient work space for removing and installing the lamp, filter and other parts.
3. Make sure that nothing blocks the projector's air intake and exhaust openings. Also, install the projector so that cool or hot air from other air conditioning equipment does not flow directly toward the projector's air intake or exhaust openings.
4. Do not install the projector in an enclosed space. If it is necessary to install it in an enclosed space, add a separate ventilation system. If ventilation is insufficient, hot air will accumulate at the intake opening. This may cause the projector's protective circuit to interrupt projector operation.

## Direction of air intake and exhaust

## Operating the projector continuously

1. If the projector is to be operated continuously 12 hours or more, lamp replacement cycle duration becomes shorter.
2. The lamp replacement cycle duration becomes shorter if the projector is operated repeatedly for short periods (one hour or less).

    Product Name : LCD Projector

[^1]:    Weights and dimensions shown are approximate. Specifications subject to change without notice.
    *1 When the Standby mode is set to Eco, network functions such as power on over the LAN network will not operate. Also, only certain commands can be received for external control using the serial terminal.
    *2 Measurement, measuring conditions, and method of notation all comply with ISO 21118 international standards.
    *3 WUXGA resolution is supported only when the signals are compliant with VESA CVT-RB (Coordinated Video Timing-Reduced Blanking).
    *4 With legs at shortest position.
    *5 Protruding parts not included.
    *6 Operation range differs depending on environments.
