

Fiber Pedestal DP

Description

The Fiber Distribution Point provides everything necessary to manage distribution fibers for an outside plant FTTx application on the street. The Fiber Distribution Point can accommodate fiber optic splitter inside of the plastic cover. It protects the splicing point from outside environment. The design and layout of the cable guides promote an efficient and ordered positioning of the cable with main body. Placement of the incoming cables allows convenient access for installation, maintenance and subsequent termination of additional secondary cable. All components of the distribution point will be of high quality design, workmanship and finishing

Applications

- Outdoor installation
- On the ground
- Distribution point for subscriber
- FTTH (Fiber To The Home)
- Data communications

Specification

Dimension: Diameter 289mm , Height 835mm

Cable entry: 2 in 24-32 out subject to type of DP installed

Input and output diameter: subject to the diameter of ducting on cement plinth

Keylock: Fiber Pedestal 1 Fiber Distribution Box 1

Installation type: on the ground, inside the cement plinth

Material for fiber Pedestal Casing (HDPE), Fiber Distribution Box (UL-94V0)

Working temperature: -10 to 80 Degree,
