BoTEMP-X

Automated Body Temperature Reader

TimeTec BoTEMP-X, a fully Automated Smart Body Temperature Reader with built-in indicators and LED display, senses body temperature through a palm within 5 to 10 cm distance for user's comfort and convenience. It is easily integrated with biometrics and card readers, make it an economical and effective solution to remedy the ongoing pandemic situation the world is facing today. TimeTec BoTEMP-X also works as a standalone reader through relay interface, as an easy plug-and-play solution.

TimeTec BoTemp-X in a door access setup requires a user to scan both devices, either biometrics or card, and get cleared in both before access permission is given. When the temperature hits the fever level, it will trigger an alarm siren (if installed), making it a convenient line of defence for businesses fighting against Covid-19.

Suitable for retail stores, restaurants, offices, schools, shopping malls, hospitals, all types of premises.

No Contact
Avoid cross-contamination

Fully Automated
No manpower required, save cost

Fast reading
Detect accurate body temperature in 1 second

Accuracy
Get precise body temperature at +/- 0.2℃ accuracy

Long-range
Accurate reading between 5-10cm from the palm

Alert
Set alarm siren off whenever the feverish temperature is detected

Temperature Display
View the temperature reading from the LED

Easy integration
Connect it to any devices as temperature reader

Easy installation
Wall mounted beside the existing reader or standalone
